## INTERPRETER TRAINING PRIVACY BOOTH

### DISTRACTION FREE INTERPRETING

*This booth is designed as a distraction-free space for sign language interpreting. With high dividing pocket-panels it provides an area that limits any interruption from others working on either side and from any activity taking place in the room.*

*The interpreter's focus can be solely on their interpreting work and the space provides a backdrop that facilitates a clean video recording of interpreting sessions for practice and review or for testing.*

### INTEGRATED DESIGN AND FUNCTION

- Pocket panels easily slide in or out to provide privacy when needed.
  - The dividing panel frames are constructed of solid oak with an oak veneer lower panel. The upper fabric inserts are neutral to blend well with any room decor.
- A cloth backdrop (included) can be easily attached to the fronts of the slide out panels to eliminate distraction and the possibility of recording background activity during an interpreting session.
- An integrated laminate desktop provides ample space for computer equipment, camera and ancillary materials.
- A low voltage lighting kit is included to provide "key" illumination so important to capturing detailed images.
- A "wire way" allows cables to interconnect from one carrel to the next.
- Leveling feet are provided for use on uneven surfaces.
- A row of interpreter booths consists of a stand-alone "starter unit" and is expanded with "add-on units" as needed.
- Optional CPU mounting bracket and keyboard tray are available.
